ROHIT SK

AI/ML & FULL STACK DEVELOPER

Linux | Cloud & Networking | Django + React | B.E. CSE (AI & ML)

Rohit08sk@gmail.com
+91 76958 37343
linkedin.com/in/rohit-sk-8302b4315

TECHNICAL SKILLS

Languages
Python, JavaScript, SQL, HTML, CSS

Web & Backend
Django, Django REST Framework, React, REST APIs, JWT authentication

Databases
PostgreSQL

Linux & Servers
Server setup, deployment & maintenance, HTTPS/SSL, automated backups, monitoring

Networking
Computer networks fundamentals, Cloudflare (CDN, caching, security), Cloudflared Tunnel

Cloud
AWS, cloud computing concepts

AI / Data
Machine Learning, Data Science with Python, Tableau, Power BI

Tools
Git & GitHub

EDUCATION

B.E. CSE (AI & Machine Learning)
K Ramakrishnan College of Technology (Anna University), Trichy
2024 – Present | CGPA 7.3 (up to Sem 4)

CERTIFICATIONS

Data Science (Python, ML, SQL, Tableau, Power BI) – **Simplilearn**

Full-Stack Web Development

Backend Development using Django

Frontend Development using React

Database Management using PostgreSQL

Data Visualization & Analytics (Tableau, Power BI)

LANGUAGES

Japanese – currently learning, and I built an app to help others do the same.

INTERESTS

Japanese language & culture, self-hosting and homelab-style server projects, sustainable tech.

PROFILE

B.E. student in AI & Machine Learning who enjoys building software *and* keeping it running. I led the development of IDCS, a live ERP platform used across my college, and I handle its Linux server, networking and Cloudflare setup myself. I like turning real problems into clean, dependable products, from a clinic's patient records to a Japanese learning app. Looking for an internship or entry-level role in full-stack, AI/ML or cloud engineering.

PROJECTS

Integrated Data Capturing System (IDCS) – Student & Staff Management ERP

Lead Developer / Full Stack Developer | Live at idcs.krgi.co.in

- Built a centralized platform that manages students, staff, attendance, timetables, gate passes and IQAC workflows for the institution.
- Developed 50+ REST API endpoints with Django REST Framework, PostgreSQL and JWT authentication; built role-based React dashboards for each type of user.
- Integrated biometric attendance sync and RFID/UID gate scanning, with offline reconciliation so records stay accurate when the network drops.
- Deployed and run it on a Linux server with HTTPS, automated backups and monitoring, and put Cloudflare in front for security, caching and traffic optimisation.
- Real usage: **6.11M+ requests**, **4.2K+ unique visitors**, **15 GB+ served** (7 GB+ from cache), tracked through Cloudflare analytics. Tuned queries and backend performance to keep it reliable across multiple institutions.

Stack: Python, Django, DRF, React, PostgreSQL, JWT, Linux, Cloudflare, Git

Madora – Clinic Patient Management System

Developer | Built for a medical clinic

- Designed and built a system for a medical clinic to organise and maintain patient records and day-to-day patient information in one place.
- Focused on a simple, practical interface so clinic staff can find and update patient information quickly.

Bengo: Benkyo Nihongo – Japanese Learning App

Full Stack Developer / UI Designer

- Built a Japanese learning app covering vocabulary, grammar, reading and conversation through lessons, quizzes and flashcards.
- Added user authentication, progress tracking and personalised learning paths based on each learner's activity.
- Created daily practice challenges and beginner-friendly conversations to keep learners coming back.
- Designed the backend and database to track lesson content and quiz performance, and structured it to support AI-based features and more languages later.

Stack: React, Django, PostgreSQL, REST APIs, HTML, CSS, JavaScript, Git

RESEARCH & DEVELOPMENT

Patent Research Project – Nano Plastic Removal System

Research & Development Contributor | Ongoing

- Contributing to research analysis, prototype development and technical documentation for a patent-oriented project on removing nano plastics from the environment (core details confidential).

NeuralSync – EEG-Based Smart Headphones

Research & Development Contributor

- Contributing to the development of smart headphones built around EEG (brain-signal) sensors, as part of the patent-oriented R&D work.
